

Drip-Line Funnel

In an effort to assist our customers with their young vine replants, we have created a drip-line funnel. The funnel can be easily cabled onto existing drip-line irrigation, and the spaghetti tubing cut to length and barb staked next to a replanted vine. This system directs water from the irrigation line directly to the new plant, rather than watering weeds or the root systems of neighbouring mature vines.

- The drip-line funnel is designed to be **re-usable**, so that once the new plant is established it can be moved elsewhere in the vineyard.
- Flexible tubing is **easy to use**, simply cut it to length and push fit each end.
- Getting the right amount of water to the right place makes **efficient use of your water supply**.
- A drip-line funnel is designed to be removable, so that once a vine reaches maturity **supplemental watering can be easily discontinued**.
- If you have taken the time and energy to replace a vine among mature vines in an already established vineyard, **we believe a drip-line funnel will give your new plant the best start in life**.
